

“Tooshlights® at our venue have really improved the flow of traffic in the restroom facilities. There is no more standing in line waiting for stalls that are actually sitting unoccupied. Our patrons have definitely noticed the difference!”

- Ed Tom, Director of Operations at The Hollywood Bowl

## WHO ARE WE?

Modus Systems, Inc. is an innovative new company positioned at the intersection of architecture and technology.

Our vision is to better connect people with the spaces that they occupy through the use of real-time, venue-specific information. Beginning with the introduction of our first product, Tooshlights® - a restroom traffic management system (RTMS), our mission is to better communicate restroom stall occupancy, so that your guests “know where to go.”

## The Smart Restroom will soon be even smarter...

With a subscription to our Modus System online cloud service, you can view data such as stall occupancy and usage, statistics, connection state, server health and even battery life, all in real time.

FROM 1 STALL TO 1000,  
ANY RESTROOM CAN BENEFIT  
FROM TOOSHLIGHTS®.

Each Tooshlights® unit consists of a smart latch and indicator light. It's a simple installation, and an easy upgrade in most restrooms.

The smart latch communicates wirelessly with the indicator light. When the stall is available, the light is green. When the stall is occupied and the smart latch activated, the light turns red.
